## Happy New Year

It's time to get to work on those New Year resolutions. Now is a great time to become even more independent, taking more control of your

own destiny. We are pleased to show you some of our environmental control products that can make every day a little easier.

Let us know if you would like more information on these and other helpful products.

## Product Highlights

### Progress

Progress is an advanced remote control system with a dynamic display screen, adapted for people with disabilities. Selections can be made by directly touching the display screen or by using switches for scanning.

It is based on a pocket-PC with the most modern technology available. Progress can "learn" IR codes from other remote control units such as those for a TV, video or stereo system. The screen is dynamic, and the information displayed can be arranged according to the needs and wishes of the user.

Progress Light, the software delivered with the Progress, is available at no charge in a demonstration CD. The program has the same appearance as in the Progress but doesn't allow the IR codes to be transmitted. Request the CD from ZYGO or get the latest version of Progress Light at [www.gewa.se](http://www.gewa.se).

### Control Prog

The GEWA Control Prog is a programmable IR-transmitter with pushbutton function and scanning with control switches. The transmitter can learn channels from other remote controls such as those for TV, video and DVD players that have built-in receivers.

Control Prog offers independence and makes everyday life simpler. You can control everything in your home, like an IR telephone, lights, home entertainment systems, doors, windows, and

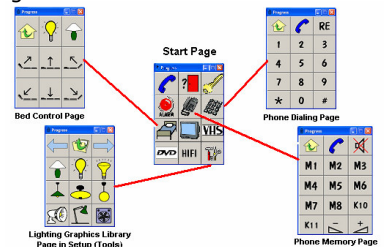

elevators.

It is possible to store 241 programmable function positions distributed over 15 levels. Use overlays to remind you of what each function will do.

### Progress Star and Micro

Put the abilities of the Progress into a PC or into a ZYGO Optimist SGD.

Simply plug the Progress Star or Progress Micro into a PC's USB port, load the Progress PC software and use the dynamic on-screen images to navigate through the pages and transmit infrared environmental control signals. The graphic displays make finding and selecting the wanted actions obvious. Arrange pages to meet the needs and wishes of the user.

The Progress Star provides two ports for connecting external switches for scanning.

Both units can "learn" IR codes from other remote control units such as those for TV, video or stereo systems.

Using the Progress Star USB or Progress Micro USB easily provides you with environmental control abilities.

### GewaTel200 Speaker Telephone

GewaTel 200 is an infrared controlled speaker telephone/dialer with built-in IR control and display. By using IR transmitters, users of the GewaTel 200 can place and receive telephone calls. All telephone functions are accessible remotely, including volume control.

50 abbreviated numbers can be stored and users can build up telephone numbers in advance without hurrying.

The GewaTel 200 has a superb sound quality with full duplex functionality thanks to the unique Omnisound™ technology, which adjusts to ambient acoustics. It is

crystal clear and sounds as if the person you are talking to is in the same room. An auto reply feature makes it easy for persons with disabilities to answer without any action on their part.
