

Fall Back to Basics

Although you might need to change your clocks back, be sure to set your sights forward. This month includes TAACC Workshops, Closing the Gap, and Halloween. And through the month

ZYGO will be releasing several new devices we think you will want to see.

Please contact ZYGO Customer Service, your local area representative, or our authorized dealers to arrange an in-service demonstration of these new products and any of our AAC and AT products.

Product Highlights

PolyTablet

A NEW approach to a very portable communication aid.

Still can't decide between the text-to-speech Polyana 4 with Persona or a full XP tablet Optimist 3? Now you don't have to. Take a look at the new PolyTABLET. It uses the same touch screen tablet case, WindowsCE OS, and the same Persona text-to-speech program that has been so well received on our Polyana-4.

The PolyTABLET is slightly larger than a portable CD player and can be accessed directly through its carrying case. Use it by touching the on-screen keyboard, an optional external keyboard, or scanning with switches.

Macaw 5

The latest in a long line of MACAWs, this is the ultimate in digital recording communication aids. It has 78 minutes of high-quality recording time on 32 levels (pages), key patterns from two to 32 cells per page, and each page can use a unique key pattern. Also, use key-linking to sequence characters together.

It uses four AA batteries, which can be rechargeable or field replaceable. Overlays are now held on with a magnetic, hinged key surround.

There are many set-ups on the MACAW to accommodate individual needs over time. It utilizes both direct selection and scanning (including auditory scanning) and a novel, simple "Morse code" access to all keys and functions.

Its ruggedness, light weight and small size make the MACAW easy to carry,

and its wedge shape provides a comfortable slope for access to the keyboard from a flat surface.

Optimist 3-HD

Add speed to the list of attributes found on our dynamic display Optimist. The internal hard drive provides enhanced performance to an already capable device.

ZYGO's Optimist 3-HD comes complete with software of your choosing. Try SDP with Boardmaker or the Grid with PCS symbols for a powerful augmentative and alternative communication (AAC) aid that is ideal for users who need speed. Supplied with USB keyboard and mouse.

Talking Aid — Wireless

...a new concept in speech generating devices!

It's what you've asked for—cell phone communication for voice and e-mail—built-in! Here's a modern speech generating device you can use.

The **TalkingAid Wireless** is a rugged text-to-speech communication

aid for face-to-face and distant conversations.

The TalkingAid Wireless is a full-functioning text-to-speech communication aid with a large, multi-line display and function-keys for rapid access to three phrases per key, word completion and simplified setups. The unit has a rugged,

moisture resistant case, a field replaceable battery, a built-in removable keyguard, and features the very effective DECTalk speech synthesizer. Plus it has voice recording as well, and too many unique features to list here.

See it this week at Closing the Gap.
